A23 Trailer Repairs Environmental Commitment

A23 Trailer Repairs strives to be a sustainable business and integrate environmental considerations into everything we do. Environmental protection and responsible usage of resources is one of our fundamental values. We consider carbon emissions, use of resources, and waste to constitute our most material impacts on the environment.

In line with international sustainability goals, we are committed to minimizing our contribution to climate change, reducing greenhouse gas emissions, and actively participating in the circular economy.

Aims & Objectives

Our environmental and operational strategies are designed to guarantee:

- **Carbon Footprint Reduction:** Implementation of energy efficiency measures, targeting the reduction of fuel consumption and emissions across our mobile van fleet and service operations.
- **Circular Economy & Waste Management:** Promoting a circular mindset to ensure resources are properly managed. This includes actively preventing pollution and reducing waste through robust recycling and reuse protocols.
- **Chemicals Management:** Strict adherence to sourcing safe materials, identifying hazardous chemicals, proper labeling, compliant storage in service vans, and responsible emergency response and disposal methods.
- **Environmental Risk Assessment:** Regular evaluation of our mobile operations to identify, evaluate, and manage environmental vulnerabilities and maintain effective risk mitigation plans.

Environmental Sustainability Framework

We pledge to protect our environment through the following core operational targets:

- Reduce the use of hazardous chemicals as much as possible, substituting harmful products with those having the least environmental impact.
- Assess environmental impacts before launching mobile service tasks at any customer site, ensuring proper environmental controls and spill kits are utilized.
- Commit to reducing reliance on fossil fuels by maintaining efficient service vans and evaluating green technology options.
- Minimizing waste generated during mobile operations and actively supporting proper disposal techniques for substances like hydraulic oil, grease, and penetrating spray.

Team Commitment

Our personal safety and well-being are our highest priorities. As a dedicated team operating from our service vans, we pledge to collaborate proactively to maintain a hazard-free, environmentally sound, and healthy occupational environment.
